Date: 28 October 2026

Project basis: Team 5 Software Requirements Specification, Version 1.0

1. Introduction

A Collaboration Diagram (communication diagram) shows the system objects or participants and the messages exchanged to complete a task. This model summarizes how the client, authentication, wallet/transaction services, data layer, and external services cooperate.

1.1 Objectives

- Identify the main participants described in the SRS.
- Number messages to show the broad interaction order.
- Show data recording and transaction notification responsibilities.

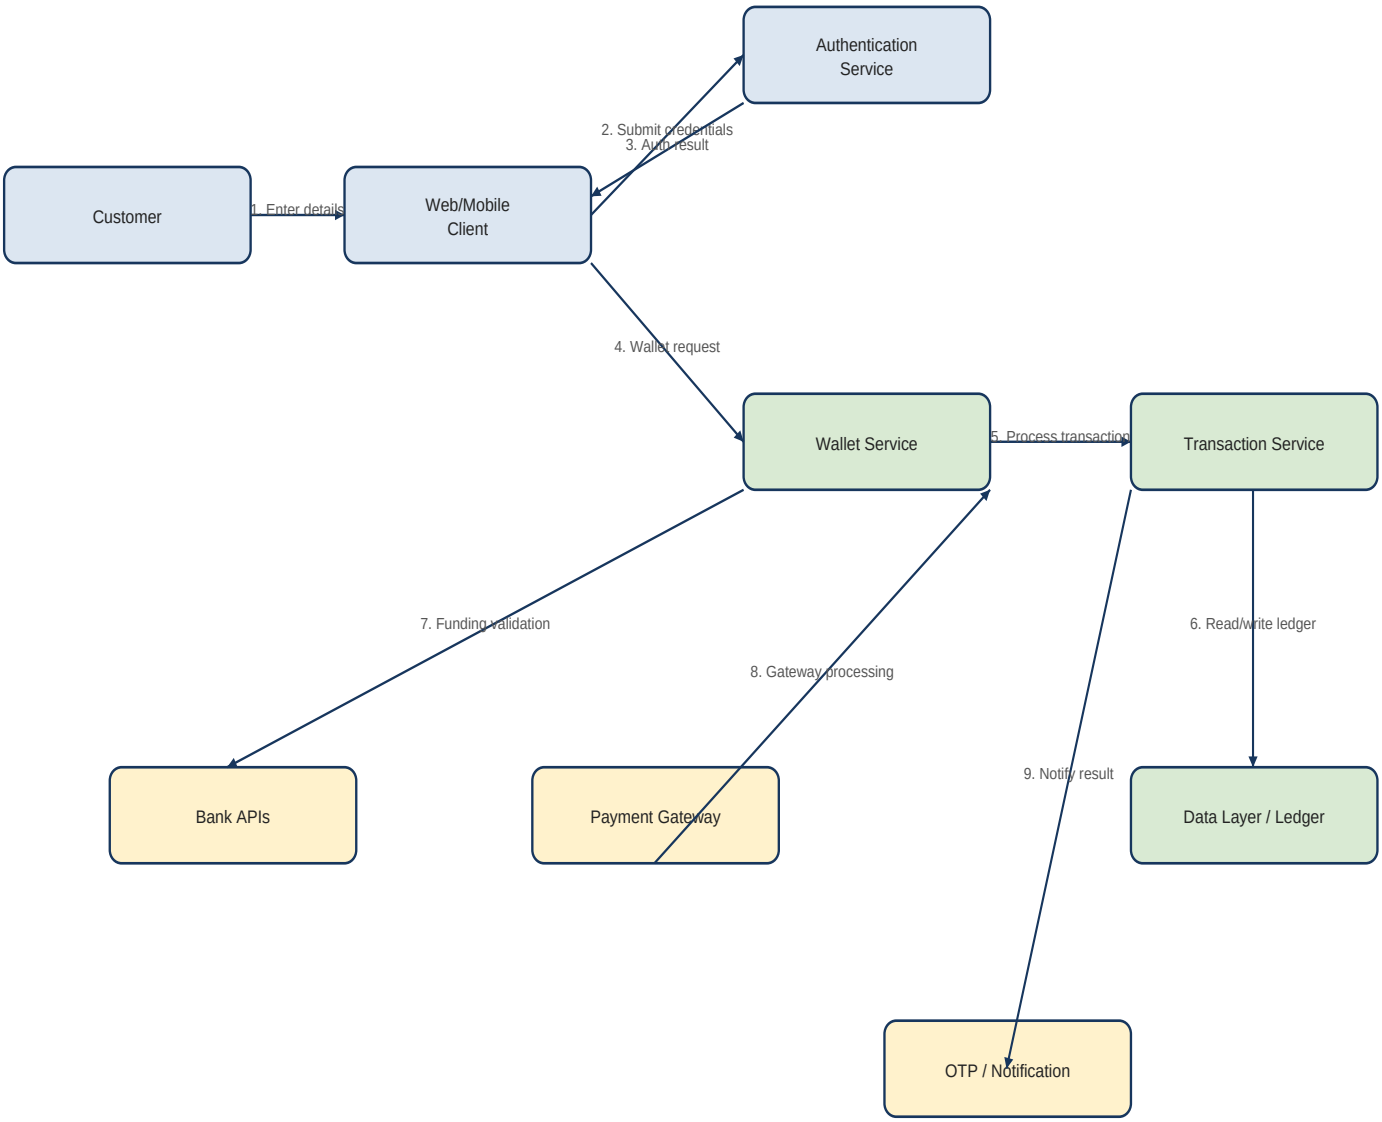
2. Project Scope and SRS Alignment

The interaction follows the SRS registration/authentication and transaction stimulus/response sequences. The diagram does not prescribe any API protocol or vendor-specific implementation.

SRS reference	Design interpretation
Sections 4.1–4.2	Registration, verification, authentication, and wallet funding.
Sections 4.3–4.4	Recipient/payee validation, confirmation, processing, and status.
Sections 4.5–4.6	Transaction history, ledger records, and notifications.
Section 4.7	Administrator monitoring and suspicious-activity handling.

COLLABORATION DIAGRAM

Figure 1. Collaboration between DWMS participants during wallet operations.



Message numbering is illustrative of the SRS flow, not a claim about exact network call ordering.
